

ENERGY VAMPIRES

THEY WANT TO SUCK YOUR POWER

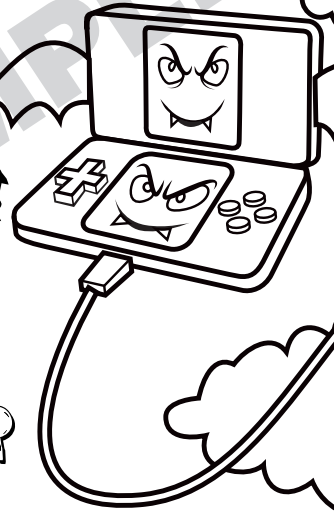

Energy vampires are electronic devices that drain power even when you think they're off. Laptops, cell phone chargers, video game consoles, computer equipment, or any device that goes into "standby mode" could be an energy vampire. Even toasters and coffee makers are energy vampires. How do you stop these vampires? It's easy. Unplug them!

How to Hunt Energy Vampires

Follow these tips to beat the energy vampires in your home:

- Search every room for electronic devices that have a light on, or make a noise, even when they're supposed to be off. Those are vampires!
- Carefully touch possible vampires, like cell phone chargers, to see if they're warm.

- The best way to beat vampires is to unplug them. This works best with small appliances, such as toasters and chargers.
- Take out a bunch of vampires at once! Plug all your computer equipment (monitor, speakers, printer, etc.) into a power strip and turn it off when you're done.
- Energy vampires love video games. Save your game and power down your video game console instead of pausing it for a long time.
