can put money  
back in your pockets!

# 10 TIPS <sup>For</sup> SAVING ENERGY IN THE HOME

**1** Switch to LED lightbulbs. They use less energy and last longer.

**2** Put on a sweater. You'll warm up without turning up the heat.

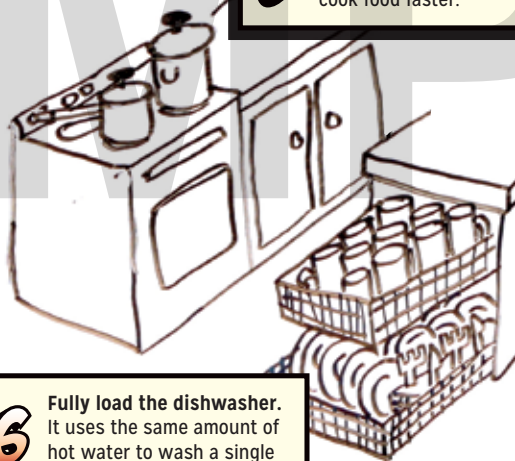

**3** Install weather-stripping or caulk. Doors and windows are a common source of air leaks.

**4** Think before opening the fridge. Keep the cold air in to save energy.

**5** Cover pots when cooking. Covers keep in steam and cook food faster.

**6** Fully load the dishwasher. It uses the same amount of hot water to wash a single dish as a full load.

**7** Choose Energy Star appliances. They're the most efficient ones you can buy.

**8** Use a power strip. Plug in multiple devices and turn off the power strip at night.

**9** Use the sleep mode. You'll use up to 60% less energy to power electronics.

**10** Program your thermostat. Set it to turn down the heat before you go to bed, and to turn it back up in the morning.
